9 // CSCI-595: Parallel Programming
10 // Homework 6
11 // Spring 2015
12 // =====
13 // The goal for this assignment is to take one image (the source) and paste it into another image (the destination)
14 // attempting to match the two images so that the pasting is non-obvious. This is known as a "seamless clone"
15 //
16 // The basic ideas are as follows:
17 // 1) Figure out the interior and border of the source image
18 // 2) Use the values of the border pixels in the destination image as boundary conditions for solving a Poisson
19 //    equation that tells us how to blend the images.
20 //
21 // No pixels from the destination except pixels on the border are used to compute the match.
22 // =====
23
24
```
